Intro

This sample is for experiments. It's not a *real* document.

Babel attempts to cover 4 engines (traditional $\text{T}_{\text{E}}\text{X}$, pdf $\text{t}_{\text{E}}\text{x}$, xet e_{X} and lua $\text{t}_{\text{E}}\text{x}$), and 3 formats (Plain, $\text{L}^{\text{A}}\text{T}_{\text{E}}\text{X}2_{\text{e}}$ and $\text{L}^{\text{A}}\text{T}_{\text{E}}\text{X}2.09$). Furthermore, there are L documents with R text, R documents with L text, and so on.

This document can be typeset with pdf $\text{t}_{\text{E}}\text{x}$, xet e_{X} and lua $\text{t}_{\text{E}}\text{x}$ without changes. The results will be different, and at some points even wrong. I hope a more or less complete basic bidi support for lua $\text{t}_{\text{E}}\text{x}$ (including footnotes, tables, etc.) will be finis e_{h} d before Summer 2018. Other engines must wait very likely until Winter.

Note in particular the differences in Latin text in R contexts. Lua $\text{t}_{\text{E}}\text{x}$ sets Latin text in L mode, even if the current language and its p a_{r} dir is R, so that the first word is at the left, not at the right after the indent (this is the expected behaviour). pdf $\text{t}_{\text{E}}\text{x}$, on the other hand, sets the text in R mode. With xet e_{X} there is an odd mixture of modes âĂŤ words in L mode are set in turn in R mode.

In pdf $\text{t}_{\text{E}}\text{x}$, the Hebrew captions are replaced by Danish ones. Change it if you have installed some 8-bit Hebrew font.

The sample PDFs in GitHub has been typeset with version 3.16.1150 (available [here](#)).
